

Parallel, Perpendicular, and Intersecting

Below are definitions and examples of parallel, perpendicular and intersecting lines.

Parallel: Parallel lines are lines that are the same distance apart along their entire length. They never cross or intersect with each other.

Parallel Line Model:

\overleftrightarrow{AB} is parallel to line \overleftrightarrow{DE}

Intersecting: Intersecting lines are lines that meet or cross each other.

Intersecting Model:

Perpendicular: Perpendicular lines are two lines that intersect with each other to form a 90° angle.

Perpendicular Model:

Circle the correct answer:

- Perpendicular
- Intersecting
- Parallel

Circle the correct answer:

- Perpendicular
- Intersecting
- Parallel

Circle the correct answer:

- Perpendicular
- Intersecting
- Parallel
